Pad print

Pad printing means that the logo is etched onto a cliché (printing plate). A silicone pad then fetches the color from the cliché and transfer it to the surface of the product. The printing surface varies depending on the shape the mug has.

The method makes it possible to print CMYK printing (image printing).

Advantages of pad printing:

- Higher appearance quality.
- The color reproduction follows the PMS map.

Pad print withstands hundreds of machine washes without quality deterioration.

It is not possible to guarantee exact PMS color when printing. Some colors that are to be printed on a dark substrate may need to be pre-printed with a white base plate to achieve a good result. We always inform you as a customer if pre-printing with a white base plate is needed.

Normal delivery time at Tampotryck is approx. 3 weeks after approval of the quotation and proofreading.

Suggested print placements:

1820	Extra cost print on large items > Ø 17 cm	2,22
06	Multiple delivery addresses, fee per additional address.	16,67
08	Extra cost for repeat orders under 100 pcs	48,89

Transfer print

Transfer involves printing the logo on a sticker which is then mounted on the product and then fired at 800°C. This causes the colors to be encapsulated in the glaze of the product and makes the print extra durable. The method is perfect for porcelain that is to be washed in an industrial dishwasher and used in a restaurant. The method is also well suited for more advanced prints.

Advantages of transfer printing:

- Greater area - around the mug - on the ear
- on the inside - on plates and dishes - Name print

Ceramic paints that can withstand the temperature of the transfer print in the oven do not match the PMS map. Therefore, we cannot guarantee 100% reproduction (the most difficult colors often contains magenta). When the logo is burned into the glaze on the mug, the logo becomes matte and transparent. This makes light print on dark substrate will not be opaque.

Since the decals are assembled by hand, each mug differs in appearance in terms of placement. We cannot guarantee that each logo will be mounted straight and in the same position.

Normal delivery time at Transfer print is approx. 5 weeks after approval of the proposal and proofreading.

06	Multiple delivery addresses, fee per additional address.		16,67
08	Extra cost for repeat orders under 100 pcs		48,89

Laser engraving

Laser marking or laser engraving will be permanent because it changes the surface layer of the print object.

We offer laser engraving on parts of our range that are made of glass, steel and wood.

Our supplier has a modern and complete machine park and can offer laser engraving on virtually any material.

Laser engraving is also perhaps the most environmentally friendly and sustainable method of marking available on the market.

Normal delivery time for Laser engraving is approx. 3 weeks after approval of the quotation and proofreading.

Checklist

(Is everything included before I send the email?)

- Contact person for the order
- Item number
- Quantity (note minimum quantity according to price list)
- Pad printing, Transfer printing or Laser engraving.
- Logo in vectorized eps or ai format (Do not send in a separate email)
- PMS colors on logo
- Double tap or single tap
- Logo size
- Placement of logo
- Delivery address and any goods marking
